Annotatsiya. Ushbu maqoladagi tadqiqot ishimizning maqsadi Farg'ona vodiysi suv havzalarida ayrim baliqlardagi gelmintlarning turlar tarkibini sistematik jihatdan o'rganish hamda baliqlarni ekstensiv va intensiv zararlashi jarayoninini o'rganishdan iboratdir. 2018-2019 yillarda olib borilgan tadqiqotlar davomida qorabaliq (*Shir mohi* – oddiy marinka)(*Schizothorax intermedius*) 42 dona, kumush tovonbaliq (*Carassius auratusgibelio*) - 47 dona, zog'ora baliq (*Sazan* - *Cyprinus carpio*) - 68 dona, oq amur (*Ctenopharyngodon idella*)- 39 dona, miqdorida baliqlari yorib ko'rish usuli orqali tekshirildi. Farg'ona vodiysining suv havzalaridagi baliqlarda 2 tip, 3 ta sinf, 6 ta turkum, 9 ta oila, 9 ta avlodga mansub 9 tur gelmintlar qayd etildi. Ularning 3 tasi sestodalar (*Cestoda*), 2 tasi trematodalar (*Trematoda*) va 5 tasi nematodalar (*Nematoda*) sinfiga tegishlidir.

Kalit so'zlar: sazan, parazitlar, gelmintlar, cestoda, nematoda, trematoda suv havzalari, Farg'ona vodiysi.

РЫБНЫЕ ГЕЛЬМИНТЫ В РЫБНЫХ ВОДОХОМАХ ФЕРГАНСКОЙ ДОЛИНЫ

Аннотация. Целью нашей исследовательской работы в данной статье является систематическое изучение видового состава гельминтов у некоторых рыб водоемов Ферганской долины и изучение процесса экстенсивного и интенсивного поражения рыб. За время исследований, проведенных в 2018-2019 гг., черного карася (*Schizothorax intermedius*) 42 экз., толстолобика (*Carassius auratusgibelio*) - 47 экз., карпа (*Cyprinus carpio*) - 68 экз., белого амура (*Ctenopharyngodon idella*) - 39 экз., количеству рыб исследовали методом разделки. В водоемах Ферганской долины у рыб зарегистрировано 9 видов гельминтов, относящихся к 2 видам, 3 классам, 6 семействам, 9 семействам и 9 родам. Из них 3 относятся к классу цестод (*Cestoda*), 2 — к trematodам (*Trematoda*) и 5 — к нематодам (*Nematoda*).

Ключевые слова: карп, паразиты, гельминты, цестоды, нематоды, trematodные водоемы, Ферганская долина.

FISH HELMINTHS IN THE FISH WATERS OF THE FERGANA VALLEY

Abstract. The purpose of our research work in this article is a systematic study of the species composition of helminths in some fish of the reservoirs of the Ferghana Valley and the study of the process of extensive and intensive damage to fish. During the research conducted in 2018-2019, black carp (*Schizothorax intermedius*) 42 specimens, silver carp (*Carassius auratusgibelio*) - 47 specimens, carp (*Cyprinus carpio*) - 68 specimens, grass carp (*Ctenopharyngodon idella*) - 39 specimens, the number of fish was studied by cutting. 9 species of helminths belonging to 2 species, 3 classes, 6 families, 9 families and 9 genera have been registered in the reservoirs of the Fergana Valley in fish. Of these, 3 belong to the class of cestodes (*Cestoda*), 2 - to trematodes (*Trematoda*) and 5 - to nematodes (*Nematoda*).

Keywords: carp, parasites, helminths, cestodes, nematodes, trematode reservoirs, Ferghana Valley.

KIRISH

O‘zbekistonning hayvonot dunyosi o‘ziga xos, boy va turli-tumandir. Respublikamiz faunasining asosiy o‘rinlaridan birini baliqlar tashkil etib, ularning 80 dan ortiq turi (baliqchilik xo‘jaliklardan tashqari) suv havzalarida qayd qilingan. Baliqlarning ba’zi turlari (Orol shim balig‘i, soxta kurakburunlar, parrak, cho‘rtan-marka va boshqalar) noyob bo‘lib, faqatgina O‘rta Osiyo suv havzalarida uchraydi. Mazkur baliq turlarining ko‘pchiligi hisobiga O‘zbekiston ixtiofaunasining tarkibi XX asrning ikkinchi yarmida boyitildi. Ularning ba’zi birlari (do‘ngpeshona, oq amur, pelyad, sevan foreli va boshqalar) maxsus iqlimlashtirilgan turlar bo‘lib, boshqalari esa (buqabaliqlar, amur chebakchasi, Amur ilonboshi va boshqalar) bizning suv havzalarimizga tasodifan iqlimlashib kelgan turlardir (Mirabullayev i dr., 2019). Ba’zi mulliflar Farg‘ona vodiysining turli toifa suv xavzalaridagi baliqlarning 11 ta oilaga tegishli 26 turini ko‘rsatib o‘tganlar (Abdinazarov, Mirabdullayev, 2015).

TADQIQOT MATERIALLARI VA METODOLOGIYASI

Sirdaryoda yashovchi baliq parazitlari haqidagi dastlabki ma’lumotlar XX asrning o‘rtalarida ilmiy matbuotda paydo bo‘ldi (Agapova, 1966). Bir qator mualliflarning tadqiqot materiallari bo‘yicha (Osmanov, 1971; Kuranova, 2002; Karimov, 2007; Safarova, 2017) Sirdaryoning quyi va o‘rta oqimi turli toifa suv havzalarida baliqlar parazitlarining 35 tadan 128 tagacha turlari qayd etilgan. Umumlashtirilgan ma’lumotlar S.O.Osmanovning (1971) ishlarida taqdim etilgan. Faunistik materiallar asosida Sirdaryo suv havzalarida 118 tur parazitlar qayd etilgan bo‘lib, ularning 40 tasi sodda hayvonlarga, 52 tasi monogeneyalarga, 11 tasi sestodalarga, 5 tasi nematodalarga, 4 tasi akantotsefalalarga, 1 tasi zuluklarga va 5 tasi qisqichbaqalarga tegishli ekanligi aniqlagan. S.B.Karimov (2007) ma’lumotlariga ko‘ra, Farg‘ona vodiysi suv havzalarida o‘tkazgan tadqiqotlari natijasida, baliqlarda turli xil sistematik guruhlarga mansub 115 tur parazitlar qayd etilib, shulardan 19 tur miksosporidiyalarga, 2 tur tripanosomalarga, 1 tur koksidiyalarga, 10 tur kiprikilarga, 47 tur monogeneyalarga, 10 tur sestodalarga, 7 tur trematodalarga, 8 tur nematodalarga, 3 tur tikanboshlilarga, 2 tur zuluklarga va 6 tur qisqichbaqasimonlarga taalluqli deb qayd etilgan. Shuni ham ta’kidlash kerakki, ayni muallifning tadqiqotlari asosan Farg‘ona vodiysining Shimoliy Tojikistonga tegishli (ya’ni O‘zbekistonga bevosita chegaradosh suv havzalari) xududida amalga oshirilgan.

Baliqchilik sohasini rivojlanishga jiddiy to‘siq bo‘layotgan baliqlarning parazitar kasalliklarini, shu jumladan, gelmintlar bilan zararlanganlik darajasini o‘rganish, tur tarkibini zamонавиy tadqiqot usullari asosida aniqlash hamda epizootik ahamiyatga ega bo‘lgan turlarni ko‘payib ketishining oldini olish chora tadbirlarini ishlab chiqish bugungi kunning dolzarb talablaridan biridir.

Ushbu maqoladagi tadqiqot ishimizning maqsadi Farg‘ona vodiysi suv havzalarida ayrim baliqlardagi gelmintlarningturlar tarkibini sistematik jihatdan o‘rganish hamda baliqlarni ekstensiv va intensiv zararlashi jarayoninini o‘rganishdan iboratdir.

TADQIQOT NATIJALARI

2018-2019 yillarda olib borilgan tadqiqotlar davomida, Sirdaryoning yuqori oqimi, Farg‘ona viloyatining Dang‘ara va Beshariq tumani baliqchilik xo‘jaliklari, shuningdek, viloyatning janubiy suv oqimlari, ya’ni Isfayramsov, Sux, Shoximardonsov,Naymansoy

daryolari, Katta Farg'ona kanali, Janubiy Farg'ona kanali, Katta Andijon kanali, Shimoliy Bog'dod (Rishtonobod) kollektorida tarqalgan baliqlardan gelmintologik material namunalari yig'ildi. Shu jumladan, Qorabaliq (Shir mohi – oddiy marinka) (*Schizothorax intermedius*) 42 dona, Kumush tovonbaliq (*Carassius auratusgibelio*) - 47 dona, zog'ora baliq (Sazan - *Cyprinus carpio*) - 68 dona, Oq amur (*Ctenopharyngodon idella*) - 39 dona, miqdorida baliqlari yorib ko'rish usuli orqali tekshirildi (Bioxovskaya-Pavlovskaya, 1985). Turlarni aniqlashda «Opredelitel parazitov presnovodnix rib fauni SSSR» va boshqa mualliflarning monografiyalaridan foydalanildi (Osmanov, 1971; Delyamure i dr., 1985) va boshqalar.

MUHOKAMA

Olib borilgan dastlabki tadqiqotlar va adabiyotda keltiriligan ma'lumotlar bo'yicha Farg'ona vodiysining suv havzalaridagi baliqlarda 2 tip, 3 ta sinf, 6 ta turkum, 9 ta oila, 9 ta avlodga mansub 9 tur gelmintlar qayd etildi. Ularning 3 tasi sestodalar (Cestoda), 2 tasi trematodalar (Trematoda) va 5 tasi nematodalar (Nematoda) sinfiga tegishlidir.

Plathelminthes Schneider, 1873 tipi

Cestoda Rudolphi, 1808 sinfi

Caryophyllida van Beneden in Carus, 1863 turkumi

Caryophyllaeidae Leuckart, 1878 oilasi

Khawia Hsü, 1935 avlodi

1. *Khawia sinensis* Hsü, 1935 Sirdaryo va Sariqsuv kolektoring quyilish joyida oq amur balig'ini ichagidan topib aniqlanib, IE -2,3%, II -1-5 nusxani tashkil etdi.

Pseudophyllida Carus, 1863 turkumi

Amphicotylidae Ariola, 1899 oilasi

Bathybothrium Lühe, 1902 avlodi

2. *Bathybothrium rectangulum* Bloch, 1782 turi Isfayramsov va Naymansoylaridagi qorabaliq (oddiy marinka) ichagida topilib, IE -3,1%, II 1-11 nusxani tashkil etdi.

Ligulidae Claus, 1885 oilasi

Ligula Bloch, 1782 avlodi

3. *Ligula intestinalis* Linnaeus, 1758 larvae Beshariq tumani "O'rinboy" baliqchilik xo'jaligidagi do'ngpeshona baliqlarning tana bo'shlig'idan aniqlanib, IE -23,7 %, II -3-38 nusxani tashkil etdi.

Plathelminthes Schneider, 1873 tipi

Trematoda Rudolphi, 1808 sinfi

Sanguinicola Odening, 1960 turkumi

Sanguinicola Graff, 1907 oilasi

Sanguinicola Plehn, 1905 avlodi

4. *Sanguinicola inermis* Plehn, 1905, Sirdaryo daryosining yuqori oqimi va unga tutash suv xavzalaridagi do'ngpeshona balig'ining qon aylanish tizimida topilgan bo'lib, IE -1,6%, II -1-6 nusxani tashkil etdi.

Orientocreadiidae Skrjabinet Kowal, 1960 oilasi

Orientocreadium Tubangui, 1931 avlodi

5. *Orientocreadium siluri* Bychowsky et Dubinina, 1954, Isfayramsov, So'x, Shoximardonsov, Naymansoylarida qorabaliq (oddiy marinka) larning ichagida aniqlanib, IE -1,1%, II 1-4 nusxani tashkil etdi.

Nemathelminthes Schneider, 1866 tipi

Nematoda Rudolphi, 1808 sinfi

Dioctophymida Skrjabin, 1927 turkumi

Dioctophymidae Railliet, 1915 oilasi

*Dioctophyme*Collet-Meygret, 1802 avlodi

6. *Dioctophymerenale*Goeze, 1782 larvae Farg‘ona vodiysining janubidagi Isfayramsov, Sux, Shoximardonsov daryolaridagi qora baliq (oddiy marinka)larning ichagida aniqlanib, IE -1,7 %, II -1-11 nusxanini tashkil etdi.

Spirurida Chitwood, 1933 turkumi

Rhabdochonidae Skrjabin, 1946 oilasi

Rhabdochona Railliet, 1916 q

7. *Rhabdochona denudata* Dujardin, 1845 Sirdaryo irmoqlaridan qora baliq (oddiy marinka) va do‘ngpeshona baliqlari ichagida aniqlanib, EI -1,2%, II -1-6 nus. ni tashkil etdi.

Ascaridida Skrjabin et Schulz, 1940 turkumi

Anisakidae Skrjabin et Karokhin, 1945 oilasi

*Raphidascaris*RaillietetHenry, 1915 avlodi

8. *Raphidascarisacuscis*Bloch, 1779 larvae “Abdurasulov Davron fayz”, “O‘rinbek” baliqchilik xo‘jaliklaridagi zog‘ora, do‘ngpeshona va kumushtovonbalig‘ining ichagi va qorin bo‘shlig‘ida aniqlanib, IE -3,1%, II 1-19 nusxani tashkil etdi.

Echinorhynchidae Cobbold, 1879 oilasi

Acanthocephalus Kaelrouther, 1771 avlodi

9. Acanthocephalus lucii Müller, 1776 Sirdaryoga qo‘yilish kollektorlaridan tutilganzog‘ora balig‘ining ichagida aniqlanib, IE - 0,8%, II -1-8 nusxani tashkil etdi.

XULOSA

Sirdaryoning yuqori oqimi va unga tutash suv xavzalari, Farg‘ona viloyati Isfayramsov, Sux, Shoximardonsov, Naymansoy daryolari, shuningdek, Katta Farg‘ona kanali , Janubiy Farg‘ona kanali, Katta Andijon kanali, Shimoliy Bog‘dod (Rishtonobod) kollektoriva baliqchilik xo‘jaliklaridan tutilgan baliqlardan 19 tur gelmintlar qayd etilib, ular quyidagi sistematik guruhlarga: sestodalar bilan zararlanish darajasi o‘rtacha IE -11,8%, II -1-17 nusxada, trematodalar -IE -1,8%, II -1-5 nusxada, nematodalar - IE -1,8%, II -1-10 nusxada va akantotsefallar - IE -1,2%, II -1-6 nusxada zarlanganligi aniqlandi.

Kelajakda ayni yo‘nalishdagi tadqiqotlarda, endemik gelmintlarning biologiyasi va polimorf turlarning molekulyar taksonomiyasi hamda epizootik ahamiyatga ega bo‘lgan baliq gelmintozlarining oldini olish chora tadbirlariga oid ishlarni amalga oshirish muhimdir.
